

ABSTRACT OF THE DISCLOSURE

The present invention is intended to provide a right presentation based on a combination of two or more rights to realize a more flexible right presentation. Disclosed herein is an information processing apparatus which can use content information within a range of usage conditions written in license information, including: a storage element for storing first license information; a receiving element for receiving second license information; and a linking element for linking a part or all of the second license information with the first license information, wherein the content information is used within a range of license information obtained by linking the first license information with the second license information by the linking element.
